Your role

As a Technical Product Analyst, you will work at the intersection of Product, Data, AI, and Business Operations to help build, improve, and scale ION products used by Tier 1 banks, Fortune 100 global corporations and other leading enterprises worldwide.

You will transform data into insights, customer challenges into product opportunities, and ideas into measurable business outcomes. Working closely with Product Managers, Engineers, customers, and business stakeholders, you will contribute to product innovation, process improvement, and data-driven decision-making across the organization.

This role offers a unique opportunity to combine analytical thinking, product understanding, customer engagement, and emerging technologies to shape the future of financial technology solutions.

Your Contribution

Data & Insights

- Analyze product, customer, and business data to identify trends, root causes, risks, and opportunities.
- Define, track, and measure key product and business metrics.
- Build dashboards, reports, and scalable analytics solutions that support data-driven decision making.
- Generate actionable insights and recommendations for Product, Engineering, and business teams.
- Support the development and maintenance of reliable data assets, pipelines, and reporting capabilities.
- Assist in building and validating predictive models to support business and product objectives.

AI & Automation

- Identify opportunities for AI-driven innovation, automation, and process optimization.
- Design and build analytical tools, automations, and workflow improvements that help teams turn data into action.

Highly confidential - any distribution to third parties is strictly prohibited.

Job description

Technical Product Analyst

- Evaluate and leverage AI technologies, machine learning capabilities, and emerging tools to improve products and internal operations.
- Support the implementation, testing, monitoring, and continuous improvement of AI-powered solutions.
- Contribute to reducing operational complexity through scalable, technology-driven solutions.

Product & Customer Impact

- Partner with Product Managers and Engineers to define requirements, validate product ideas, and measure outcomes.
- Support product strategy, roadmap planning, and feature development through data-driven recommendations.
- Build a deep understanding of customer workflows, product usage patterns, and business requirements.
- Collaborate directly with customers and internal stakeholders to understand challenges, resolve issues, and support product adoption.
- Communicate insights and recommendations effectively to both technical and non-technical audiences.
- Own initiatives end-to-end, from problem identification and analysis through delivery and measurable business outcome.

Your Growth

You will work closely with Product, Engineering, Data, AI, Client Services, and business teams — building fluency across multiple disciplines rather than progressing along a narrow, single-track path.

You will learn:

- Product Management and End-to-End Product Delivery
- Data analytics, reporting, and visualization
- Data Engineering and modern data platforms
- AI, automation, and data-driven decision making
- Financial technology and enterprise software
- Customer-centric problem solving

You will gain exposure to:

- Product Strategy and Roadmap Planning
- Customer and Market Insights
- Leadership
- Client interactions, and Stakeholder Management
- Real-world business challenges faced by global institutions

You will develop expertise in:

- Product Analysis
- Data Analytics & Visualization

Highly confidential - any distribution to third parties is strictly prohibited.
